In a recent HexArmor survey of industrial companies, 96% of respondents said that protective eyewear was a mandatory PPE item for all or some of their employees.

In the US alone, companies are spending $350 million annually on safety eyewear for their employees.

That’s Good, Right?

300,000 workplace eye injuries send people to the emergency room each year in the US.

$300 million annually in the US in medical bills, compensation, and time off because of eye injuries.

The average cost of an eye injury is $1,463.

90% of those 300,000 injuries could have been prevented if workers had been wearing appropriate safety eyewear. (That’s 270,000 workplace injuries that could be avoided each year!)

The average cost of an eye injury is $1,463.

Where’s the disconnect? COMPLIANCE.

Workers are struggling with these four factors:

- **COMFORT**: 48% of survey respondents said that comfort is always or often a barrier to wearing protective eyewear.
- **FIT**: 29% of respondents said their safety eyewear is too tight, too loose, or the temples are not the correct length.
- **PERFORMANCE**: 72% of respondents cited fogging eyewear as their biggest issue with their current eyewear.
- **STYLE**: 21% of respondents said they don’t want to wear their protective eyewear because it isn’t “cool” or stylish enough.

The BEST eye protection is the protection that’s worn.

The answer? WEARABILITY™

The perfect balance of comfort, fit, performance and style

Learn more about what it takes to get your workers to wear their safety eyewear (and keep them on) at hexarmor.com.

The WEARABILITY™ approach to safety eyewear will help increase compliance, eliminate injuries, and reduce costs.

Not when...
